Contractors have been on the ground treating those properties confirmed to contain asbestos with a non-hazardous gel that traps the asbestos dust until it can be safely removed.

Detailed assessments are also being completed to look at the most effective ways to remove bushfire waste in the affected regions.

Where possible, the State Government will recover, reuse and recycle things like rubble, brick and metal roofing, shed sheeting and even fencing wire, to divert salvageable resources from landfill.

The South Australian Government has also committed to waiving the solid waste levy for fire-affected waste.

Anyone affected by the bushfires who needs help with the clean-up of debris is encouraged to register their needs through the Green Industries SA website at greenindustries.sa.gov.au/register-your-waste-needs

For the latest information on the bushfire recovery visit dhs.sa.gov.au/recovery
